DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see remark pages 3-4, filed July 28, 2004, with respect to of the combination between Kobrin in view of Hsieh et al does not result in forming the electroplating metallic structure in the narrowed trench which having the spacer layer material anisotropically remove at the bottom of the trench while leaving intact vertical portions of the spacer that cover the trench side walls, have been fully considered and are persuasive.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: a method for reducing feature size in a thin film magnetic write head not taught by the prior art of record. The prior art of record fails to show, teach or suggest, alone or in conjunction, all the limitations of the claimed invention having the insulative spacer layer deposited by low temperature chemical vapor deposition process for covering the trench; anisotropically etching the bottom of the trench to remove only the spacer layer at the bottom of the trench; and forming a metallic structure by electroplating metallic material in the trench.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 3729
